DataQualityReportTemplate

Data Source	Data Quality Issue	Severity	Resolution Plan
Dataset (Restaurant reviewsand metadata)	Missing values in fields like restaurant name,location,or ratings	Moderate	Perform data imputation using techniques like mean/mode for numeric values and most frequent value for categorical data. Alternatively, remove rows with critical missing fields.
Dataset (User reviews)	Duplicateuserreviewentries	Low	Remove duplicate records using drop_duplicates() in pandas or SQL DISTINCTqueries. Use datetime parsing libraries (e.g., pandas.to_date time) to standardize all date/time fields.
Dataset (Timesta mpfield)	Inconsistentorincorrect timestamp format	Moderate	

Dataset (Restaurant metadata)	Inconsistent formats (e.g., location written in different ways like "NY", "New York")	Moderate	Apply data standardization techniques, using string functions or regex patterns to unify the format.
Dataset (User preferences)	Sparsely data or insufficient user history	High	Implement fallback strategies such as popularity-based or content-based recommendations when user data is lacking.
